General Description

The line includes mainly 9 machines, not all of the machine is necessary. You can choose from the machines.

Step1: Crusher-- It is used to crush the wood clogs into sawdust

Step2: Screw conveyor--It is used to transfer the sawdust to the dryer machine. You can also use man power instead of this machine.

Step3: Dryer--If the moisture of the powder is more than 12%. Then you can use this machine.

Step 4: Screw conveyor--It is used to transfer the powder to the pellet machine. You can also use man power instead of this machine.

<u>Step5</u> Pellet machine--It is used to make the powder into pellets. The moisture of the powder should be from 8-12% for good working.

Step6_Lifting machine--It is used to lift the pellet into the cooling machine.

Step7 Cooling machine--It is used to cool the pellet.

Step8 Lifting machine--It is used to lift the pellet into the packing machine.

Step9 Packing machine--It is used to pack the pellets in bags.
